

Exercise 1

1.1 public class Person

```
{  
    public String Nom {get; set;}  
    public String Prenom {get; set;}  
    public int Age {get; set;}  
}
```

public class Employee: Person

```
{  
    public double Salaire {get; set;}  
}
```

1.2 public class Cercle

```
{  
    public double Rayon {get; set;}  
    public String Couleur {get; set;}  
}
```

public class Rectangle: Cercle

```
{  
    private  
    public double Largeur {get; set;}  
    public double Hauteur {get; set;}  
}
```

1.3

```
public class Forme
{
    public double calculerAire()
}

public class Cercle : Forme
{
    public double Rayon {get; set;}
    public override double calculerAire(Rayon);
}

public class Rectangle : Forme
{
    public double largeur {get; set;}
    public double Hauteur {get; set;}
    public override double calculerAire();
}
```

Exercice 2

```
public class Forme
{
    public double calculerAire();
    public double calculerAire(double rayon);
    public double calculerAire(int largeur);
}
```

Exercise 3 cc

```
public abstract class Forme
{
    public abstract double calculerAire();
}
public class Cercle extends Forme
{
    public double Rayon {get;set;}
    public override double calculerAire(Rayon);
}
public class Rectangle extends Forme
{
    public double Largeur {get;set;}
    public double Hauteur {get;set;}
    public override double calculerAire();
}
```
